

Commitment to Biodiversity Conservation and No Deforestation

Our organization is committed to conserving biodiversity and to no-deforestation in all our facilities and operations we control. This policy outlines our commitment to actions that protect ecosystems and promote environmental stewardship.

1. Biodiversity Conservation:

- We will identify and support in protecting the areas of high biodiversity value within our own facilities and operations that we control.
- We will conduct a risk assessment of our operations and have mitigation strategies in place for reducing the impact, if any.
- We will develop necessary biodiversity targets and management plans for our facilities and operations that we control.
- We will support and engage in conservation projects and initiatives that enhance biodiversity around the areas we operate.

2. No Deforestation Commitment:

- We will ensure that our facilities and operations we control do not contribute to deforestation.
- We will promote the use of sustainable products and materials, to the extent feasible.

3. Sustainable Land Use:

- We will adopt land-use practices that maintain and enhance ecosystem services.
- We will avoid activities that lead to land degradation and loss of biodiversity.

4. Stakeholder Engagement:

- We will collaborate with local communities, governments, and NGOs to support biodiversity conservation and sustainable land use.
- We will engage with stakeholders to promote awareness and education on biodiversity and deforestation issues.

5. Compliance and Reporting:

- We will ensure compliances with applicable regulations governing biodiversity and forest conservation.
- We will report our progress and challenges in implementing this policy to our stakeholders.
